

## Sanovo Water Assessment

**You are probably aware**, that your water is a significant cost and therefore a reduction of your earning capability. You have considered to implement chemical, physical or/and biological treatments or even re-use the water. But the cost seems high and there is a risk that the system is not the optimal solution. Is it the right way to go? Will you gain the benefits you expect from your efforts and investment? And what are the actual economical consequences?

**Sanovo Water Assessment** helps you to identify the critical points, to uncover the possibilities and to evaluate the consequences of different technical solutions. We base this on an examination of the wastewater and process water needs in your production. Sounds expensive and risky? It is not! Sanovo Solutions offer Water Assessment after the NO CURE - NO PAY principle. If no feasible solution can be identified our services will be free of charges for you. We call this NO CURE - NO PAY\*.

**The Water Assessment** is carried out by our technical staff. They bring many years of experience into your production, and all have investigated similar plants with similar problems - your guarantee for taking the right actions. Your potential savings along with return on potential investments are presented to you with suggestions for optimisation - or project proposals. The payback time of the suggested improvements can be as low as one year depending on your local restrictions and existing solution.

**Therefore you do not need to wait!** Reduce your process- and wastewater costs and discover suggestions to better solutions.

**Sanovo Solutions** will be pleased to take on project management of implementing the suggested solutions as consultants or as turnkey suppliers on your demand. The extent of the project management is agreed beforehand and normally charged €100,- per hour.
